

Overall information: I know you can't tell me details about your product yet, but I want to know information about your infrastructure, that should not contain intellectual property of company and yet might tell me something relevant about how you work.

- What kind of build system do you use?
- What kind of compiler do you use?
- What is your git/versioning workflow?
- How is the work organized? (jira tickets? ...) | OR imagine that new feature is wanted by the leadership, how it is told to the developers? how it is decided *who* will work on it?
- What is your relationship to 3rd party libraries?
- Do you have CI? what is done in it?
- In case bug is discovered, what is the process? Who fixes it?
- Do you use static analysis?
- How is merge review done?
- Do you have design reviews?
- Do you have something like coding guidelines/standard ?
- Do you follow MISRA or similar standard?
- For the overall architecture of the software system, do you follow some known pattern (ie: actors, or microservices) that we can talk about?
